

PARTNERSHIP PROSPECTUS · 2026

Hack Armenia

A 24-hour LLM build sprint where Armenia's strongest engineers and researchers ship AI systems for the country's public interest — the finale of the Armenia LLM Summer School.

 August 8, 2026

 24 hours, non-stop

 AI9 Startup Campus, Yerevan

The opportunity

The Armenia LLM Summer School is the country's flagship program on large language models, taught by researchers from **NVIDIA, Meta, Google, Amazon and ServiceNow**.

Hack Armenia caps the 2026 edition with a 24-hour sprint: teams build working LLM systems for real Armenian public-interest problems — and sponsors get a front-row seat to the talent and the work.

Why it matters for Armenia

The sprint channels top talent into domains the country actually needs — health, education, security, agriculture, energy, finance and disaster response — and every output ships open-source.

Why it matters for you

Recruiting, brand, and a rare chance to set a real technical challenge for a room full of motivated builders — while backing the region's AI ecosystem.

Proven demand, serious talent

The Summer School that Hack Armenia caps is heavily oversubscribed and highly rated — the sprint draws from exactly this pool of vetted engineers and researchers.

A selective, in-demand pipeline

2025 admissions funnel — roughly 3.2 applicants for every available seat

Who applies

2025 applicant mix (multi-select; graduate, undergraduate & industry)

How they rate it

2024 exit survey, out of 5 (n = 55)

Sponsors meet pre-vetted talent. Every team is drawn from a cohort selected out of 248 applicants (≈3.2 per seat) and rated 4.5/5 — not a random crowd, but the region's strongest LLM builders.

One challenge, nine Armenian public-interest tracks

Teams pick a track and build an LLM system that can evaluate evidence, reason under uncertainty, and generalize — with a working prototype and a real evaluation. Every track is judged by one rubric.

Urban development

City ops, planning & mobility

Public systems & policy

Filings, evidence & transparency

Healthcare

Safe triage, admin & patient education

Education

Tutoring, grading & Armenian-language learning

Security

Phishing defense, secure code & threat triage

Food & agriculture

Crop advisory, food safety & nutrition

Environment & energy

Efficiency, hazards & resources

Finance & fintech

Fair credit, fraud & literacy

Emergency & disaster

Coordination, preparedness & response

The 24 hours

Indicative rhythm — the final schedule is shared at kickoff

What every strong build shows

A working prototype · a real (even lightweight) evaluation · named failure modes & safety · realistic data · and a clear reason an LLM is the right tool.

Open by default

Winning projects are open-source and fully reproducible — a lasting public good, and a credible showcase of what your compute, data or problem statement made possible.

Partner with Hack Armenia

Four reasons companies back the sprint — and a tier for every level of commitment.

Meet & recruit talent

Direct access to Armenia's sharpest LLM engineers and researchers, mid-build and at demos.

National brand presence

Your logo across a flagship program with press, media and open-course reach.

Shape a real challenge

Put your own problem statement in front of motivated, capable teams.

Invest in the ecosystem

Strengthen Armenia's AI talent pipeline and public-interest technology.

Sponsorship tiers

INDICATIVE — SUBJECT TO CHANGE

	Community In-kind	Silver \$2,500	Gold \$6,000	Title from \$12,000
Logo on site, materials & event screens	Small	✓	Large	Top
Social & press mentions	✓	✓	✓	✓
Mentor & judge seats	1	1	2	4
Recruiting access (opt-in profiles)	—	✓	✓	✓
Set a track / problem statement	—	—	✓	✓
Named prize category	—	—	✓	✓
“Presented by” naming + opening remarks	—	—	—	✓

Every tier is flexible — cash, compute, prizes, mentorship, or a problem statement can all count toward it. Let's tailor a package to your goals.

Ways to support

Four concrete forms of support — mix and match to build your partnership.

Compute & API credits

GPUs or model-API credits so every team can build at full power.

Prize pool

Cash or hardware prizes that draw the strongest teams.

Mentors & judges

Your engineers mentor teams during the sprint and judge the finals.

Problem statements & data

Bring a real problem — and, optionally, data — from your domain.

How to get involved

1

Choose a way to support

Compute, prizes, mentors, or a problem statement — whatever fits your goals.

2

We tailor a package

Logo tier, mentor & judge seats and recruiting access, mapped to what you want.

3

Join us on August 8

Meet the teams, judge the finals, and see your challenge come to life.

Let's build something for Armenia.

Reach out to discuss a partnership that fits your goals.
